

Sirana AppAnalyzer for Exchange

Detailed usage analysis and reporting for Microsoft Exchange Server

Overview

Sirana AppAnalyzer for Exchange (AppAnalyzer) is a reporting and analysis solution that helps e-mail administrators, IT personnel, and Executive managers understand Microsoft Exchange usage.

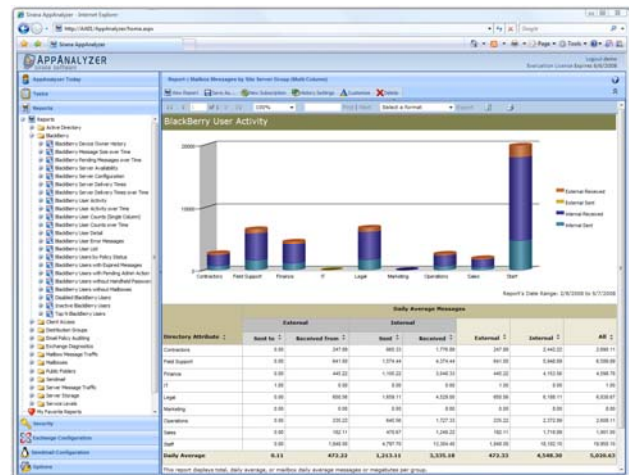

Through an extensive list of pre-defined, automated reports, AppAnalyzer displays comprehensive usage data about your Exchange servers, including message traffic analysis, message delivery times, historical and current mailbox and public folder storage data, client access usage, chargeback information and message content analysis.

Solutions for Today's E-mail Challenges

As e-mail remains a critical application for organizations today, new administration and management issues continue to emerge.

- ◇ E-mail administrators struggle to keep-up with the impact of system upgrades and configuration changes.
- ◇ IT Managers need confirmation that their e-mail infrastructure is being managed efficiently.
- ◇ Business Unit Managers, such as Human Resources Management, need assurance that e-mail acceptable use policies are adhered to by all employees.
- ◇ Executive Management wants the big picture view of how their investment in e-mail resources is paying-off.

AppAnalyzer delivers the reports and tools necessary to successfully address the needs at each level of your messaging system management.

AppAnalyzer's WebAdmin Console lets you schedule and view reports for delivery from anywhere using a web browser.

Key Benefits

Achieve service levels — Enables you to analyze service level metrics so you can evaluate areas for improvements and adjust traffic on servers to better meet end-user demand. Demonstrate service level achievements through a number of reports, including message delivery times between sites, groups or servers.

Allocate messaging system costs — Offers reports to let you chargeback users or groups of users, such as departments for e-mail and storage resource use.

Comply with e-mail acceptable use policies and industry regulations — display e-mail activity for individual users, Internet domains, suspect SMTP addresses, and keywords and attachments within all messages.

Promote administration efficiencies — Allows you to understand Exchange usage and identify trends and problems at a glance.

Sirana AppAnalyzer for Exchange

Key Features

AppAnalyzer's SQL Server Reporting Services-based reports provide unmatched flexibility for analyzing and understanding your Exchange infrastructure.

- ◇ Granular reporting down to the individual message level provides information on each message's originator, recipient, size, date, time, subject, and server
- ◇ Designed to scale for very large Exchange organizations (100,000+ mailboxes)
- ◇ Does not require installation of an agent on the Exchange server for data collection
- ◇ Easily customize reports for the specific level of detail that you need—without using a cumbersome report writer
- ◇ Generate summary level reports to better understand high-level metrics and analyze long-term trends
- ◇ Native drill-down capability within reports, such as changing focus from the enterprise view to a specific server to a specific user
- ◇ Built-in scheduling of report publishing to e-mail and file share
- ◇ Export and publish reports in various formats (CSV, XLS, XML, TIF, PDF, HTML)
- ◇ Measure message traffic for an enterprise, OU, site, server, department or user
- ◇ Track mailbox or public folder storage trends for an enterprise, OU, site, server, department or user
- ◇ Display Client Access usage reports to understand how OWA, OMA, ActiveSync, and RPC over HTTP is utilized
- ◇ Identify unused distribution groups, mailboxes, and public folders
- ◇ Develop departmental traffic and storage summaries for chargeback or combined analysis
- ◇ Evaluate enterprise message delivery times
- ◇ Track Internet e-mail traffic to/from specific domains
- ◇ Determine top senders and receivers of e-mail and/or top attachment file types

Sirana Software

Sirana Software develops enterprise analysis, management and reporting solutions that help you understand what your messaging and collaboration systems are doing for you now and what they can do for you in the future. With solutions like Sirana AppAnalyzer Enterprise Edition, you'll be better able to make informed business decisions that help your company leverage your Microsoft Exchange messaging service as a critical business resource.

Sirana's customers are global leaders in a wide range of industries, including several of the largest US federal and state government agencies. Sirana Software is a NetIQ Technology Partner and Microsoft Certified Partner.
